

Sampling and Testing Procedures for the Land Application of Biosolids

Samples of biosolids material may be obtained by the County before, during, or after the process of applying the material on an approved site. Samples of soil, surface water and well water may be tested at the specific written request of a property owner immediately adjacent to a site permitted to receive biosolids. Requested sampling and testing will be conducted to the extent it is generally reimbursable by the Commonwealth of Virginia. Any sampling or testing beyond those parameters would be done only at the specific direction of the County Administrator on a case-by-case basis.

Samples will be tested by an approved, independent laboratory. Tests will be conducted according to Virginia Department of Health standards. Campbell County will pay the costs associated with sampling and testing and will seek reimbursement from the Commonwealth of Virginia. Test results are public information in accordance with the Virginia Freedom of Information Act. They may be shared with other regulatory agencies and interested parties. Test results will be made available to any citizen or media representative requesting them subject to a nominal fee for copying and distribution.

Property owners wishing to request sampling and testing must complete the form below and send it to:

Department of Community Development
Attn: Biosolids Monitoring
P O Box 100
Rustburg, VA 24588

Name of Property Owner(s): _____

Mailing Address: _____

Daytime Telephone #: _____

Address or location of property to be tested, if different from above:

I certify that I am a legal owner of the property listed above. I understand that in making this request, I am authorizing employees of Campbell County to enter my property to conduct sampling and testing activities during normal work hours. Test results will be public information and I may request a copy upon payment of any required fees.

Signature: _____ Date: _____
